

## Opening Ceremony of ACeSYRI Laboratory at SDU

At the Suleiman Demirel University (SDU), an ACeSYRI (Advanced Center for PhD Students and Young Researchers in Informatics) laboratory was opened. The laboratory aimed to increase potential of doctoral students and young researchers. It operates on the basis of the Faculty of Engineering and Natural Sciences. Rector of SDU Kuanysh Yergaliyev also took part in the celebrations on the occasion of its opening.

According to the dean of the faculty, Andrey Bogdanchikov, this project was implemented thanks to the strategic cooperation of the SDU with the Consortium of universities of the international program "Erasmus +" and with its comprehensive support. Along with the SDU, this consortium includes seven universities in Kazakhstan, three educational institutions in Europe and two Kazakhstani associations.

The activities of the newly opened laboratory are aimed at connecting external partners with PhDs, students and leaders of the SDU, to create conditions for the development of the young potential of researchers. At the same time, it is a unique platform for interaction with Kazakhstani and foreign universities, for a wide exchange of experience. In parallel, the official website of the project and the centralized portal were launched.

The laboratory is equipped with computers, a telecommunications system and the necessary equipment that allows you to interact online with the audience, from anywhere in the world. As part of its grand opening, all technical capabilities were demonstrated, and the first online connections were tested.
